

Homefree

[Our Additional Dwelling Unit \(ADU\), HomeFree](#) is a 320-square-foot home, a perfect space for a single person or a couple. Put it in the backyard to house a student, elder, or guest. **Out on the back forty, it can be a comfortable home for your caretaker.** Cities can put up multiple units to ease the housing shortage or homeless crisis. Gather friends and build a Cottage Community. The possibilities are limitless!

Home Contained units save you money over time. We use sustainable materials that will last and, because our designs and materials are of higher quality than many homes, you will never have to deal with the four most costly homeowner repairs: replacing the roof, water heater repair, foundation repair, and siding repair...Our HomeFree unit will give you more free time to live your life without breaking the bank.

HomeFree is approved in Humboldt County. The county has sped up the process and pre-approved this ADU. Site plans, energy calculations and geologic study may be required, and we can help if needed.

HomeFree was produced in collaboration with Mar Structural, a structural and civil engineering firm in Oakland, California and Henderson Engineering in Lenexa, Kansas.
